Calendar

Mission	Date	Start Time
M01 - « First Wave »	30/04/2020	9.10 pm (Paris)
M02 - « Bloody Raid »	14/05/2020	
M03 - « Bold attempt »	28/05/2020	
M04 - « Last Battle »	11/06/2020	

NB : The dates above are bound to change. In that case, the participants will be informed.

Contacts

Campaign managers

The managers are listed in the following table :

Name	Role	Preferred contact mean	Commentary
Flip4Flap	OFCRA President Side Leader	Forum OFCRA Discord	For all questions regarding attendance and organisation.
Manchot	Server Administrator Diplomatic Relations manger Bureau Member		
Mrwhite350	Mission Maker OFCRA Member Squad Leader	Forum OFCRA	For all questions regarding the missions (ACE settings, difficulty loadouts, complementary informations,...)

Channels of Communication

It is possible to contact the people listed above by using the following means sorted by order of priority:

- OFCRA Forum > <https://ofcrav2.org/forum/index.php?action=forum>
 - If it's a confidential information, use private messaging.
 - If it's a public information, you can directly post in the topic dedicated to the campaign. Si c'est une information publique, passer par le topic de campagne prévue à cet effet.
- OFCRA Discord > <https://discord.gg/bWtGS7N>
 - Either by private message with the campaign managers.
 - Or by posting in the « Général » channel.
- By directly messaging them via Steam .

Scoreboard

Mission	Points per mission	Objectives	Points per objectif

Sitac

Against all odds, the 1991 Moscow coup d'etat ended in a crushing victory for the Communist Conservatives. Stopping Gorbachev's reforms: The doctrine of the new presidency of the Soviet Union is clear: *"it is necessary to reaffirm our position as a major international power"*.

In fact, the USSR began a violent reoccupation of its strategic bases in the Warsaw Pact countries. In addition, the new council orders that the abandoned military bases within Russian territory are put back into service, with a marked insistence on the positions in the Bering Sea and in eastern Siberia. The latter are of great importance for the new Soviet doctrine, their very close position to the United States makes it possible to establish launch sites for tactical nuclear missiles.

Namalsk Island is one of the important places. Militarized in the early 1950s, the large amount of equipment and personnel contributed to the development of this inhospitable piece of land located in the Bering Strait. Heavy industry developed there thanks to the presence of coal resources and military chemical research laboratories were also established there.

In the late 1970s, Namalsk was abandoned by the armed forces, leading to the closure of industrial complexes and the departure of military scientists. All of the infrastructure is abandoned, without any particular protection.

The few civilians there find themselves out of work, a large part of them emigrate to the continent. The rest, in order to survive, is devoted to recovery from abandoned sites and smuggling. Indeed, the position of the island, located between Alaska and Siberia allows an easy maritime communication between the American and Asian continent thus creating a secondary way to transit unsavory goods there. A true bartering industry is born and the absence of authority on the island leaves the smuggling groups to make the law.

This calm period ends when the Soviet military return to the island to put the facilities back in service. But the work is long, the USSR is in dire need of equipment and its economy is at half mast, only the military bases are slowly being rehabilitated. At the moment only one infantry regiment of the guard is in position, awaiting orders and heavy equipment. Scientists are also present, researches in the archives of the Academy of Sciences show strange phenomena on the island and the locals are very often sick when they approach the old factories. However, no additional information is available, it has disappeared over time and no scientist present on the island at the time can be found.

The USA have a very negative view of the new communist expansion in the area. Fresh out of the first Gulf War, they fear that a Soviet - Middle East alliance will emerge and could oppose NATO. In addition, Namalsk

Island is close to the US coast, which could become a very dangerous threat in the event of missiles being installed on the island. Several sources from the CIA and the US Air Force Intelligence Center suggest that these fears are well-founded. In addition, a file exists within the NSA on the secret searches carried out on the island, but information available is fragmented.

The US Defense Department does not want a new missile crisis and wants to strike first to mark the end of the unrestricted reoccupation of the Soviets. A Namalsk invasion plan is entrusted to USNORTHCOM. The objectives are clear: storm the island, restore order and neutralize the Soviet forces before they have time to receive reinforcements. After several days of discussions, President H.W Bush has just given his agreement to lead the operation. Elements of the 3rd fleet converge on the island to allow marines to deploy.

Surprised but unimpressed by the American reaction, the Soviet command has just alerted the infantry regiment of the guard posted on Namalsk.
